

Intelligent Natural Language Analytics Platform

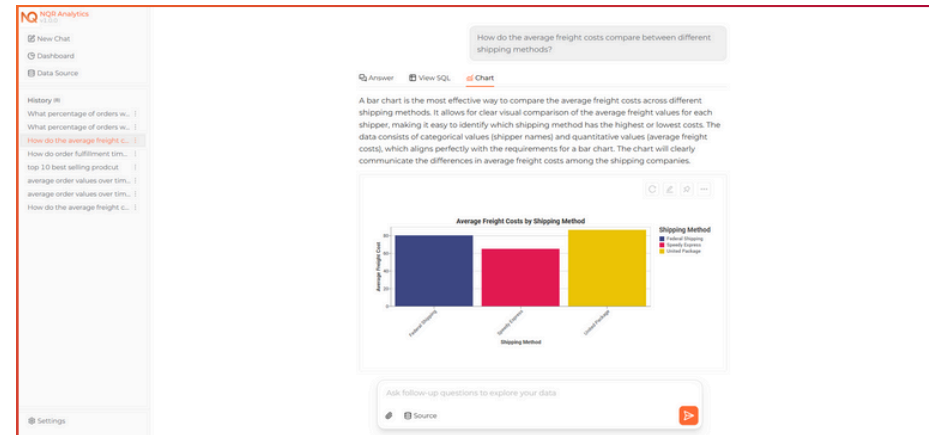

Conversational AI-Powered Business Intelligence Built on NQRust-Lake Foundation

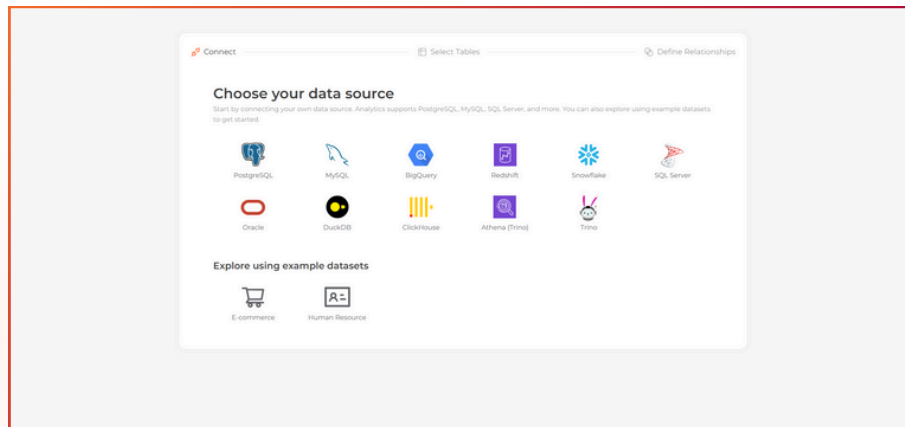

Product Overview

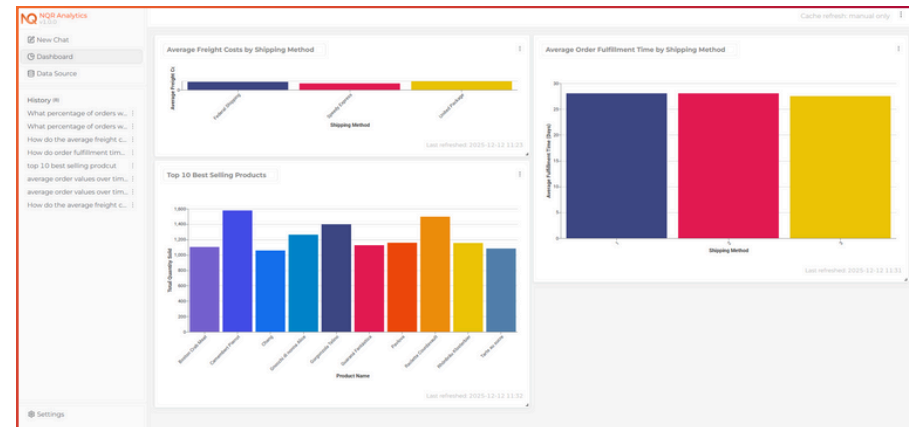

This screen shows an analytics workspace where users can ask business questions in plain language and instantly get clear answers from their data. On the left, the menu helps users start new analyses, view past questions, and manage data sources, making it easy to navigate insights over time. In the main area, the system displays a written explanation, a summary table, and options to view charts or underlying data, so insights can be understood quickly or explored further if needed.

This screen shows how a business question is answered visually and in plain language. Users can view the insight as a chart to quickly compare shipping costs, read a simple explanation, or ask follow-up questions, while the history on the left keeps track of past analyses. Overall, it makes exploring and understanding data easy and intuitive for business users.

This screen is where users connect their data to the analytics platform so insights can be created. It lets users choose from popular data systems such as PostgreSQL, MySQL, Snowflake, BigQuery, and others, making it easy to link existing business data without complex setup. For new users, ready-to-use example datasets like e-commerce and human resources are available to explore the platform instantly.

This dashboard presents a visual summary of key business performance insights in one place. It uses easy-to-read charts to show comparisons such as shipping costs by delivery method, order fulfillment times, and the top-selling products, helping users quickly spot trends and differences. The left menu lets users switch between asking new questions, viewing saved insights, and managing data sources, while the refresh indicators show when the data was last updated.
